#### PO274/5 **OO** Scale **Low Relief Terrace House Fronts** INSTRUCTIONS

#### CHECK LIST

#### This kit pack should contain the following:

- 2 x SHEET A Components for house fronts
- 1 x SHEET B Extra bits for customisation.
- 2 x PLAIN GREY CARD Interior strengthening parts. 1 x LASER-CUT CARD Selection of front gates.
- 1 x GLAZING SHEET.
- 2 x INSTRUCTION SHEETS.
- 1 x RIDGE TILE SHEET.
- 1 x PAVING SLABS SHEET.

### **PRE-BUILD PREPARATIONS**

#### Tools you'll need to build this kit

(all of which are available on our website: www.metcalfemodels.com)

- 1. A modellers knife
- 2. A cutting mat
- 3. A steel ruler
- 4. A pair of fine pointed tweezers
- 5. Water colour paint set
- 6. Metcalfe ultra fine tipped glue applicator
- 7. Glue (see below)

#### Glues

We recommend using a combination of glues, Speed bond and Roket card glue, both are produced by Deluxe materials. Roket card glue is an instant, fast drying glue which is great quickly securing components that require little positioning. It also comes with it's own fine tip applicator.

Speed Bond is a slightly slower drying glue which is ideal for the components where careful positioning is required.

UHU solvent free is also a great all round glue and is excellent for fixing the plastic windows.

Metcalfe ultra fine tipped glue applicator is essential for applying small amounts of glue to the smaller components.

These bottles come in a pack of 3 and are best used with Speed Bond and UHU, simply unscrew the top and fill with the glue.

#### **Extracting the components**

To prevent the components from falling off the sheets they are held secure with scorelines, marked with a  $\longrightarrow$  These are cuts that only go about 75% of the way through the card. To release them carefully run the point of your knife along these scorelines and they will come seamlessly away, be very careful your blade does not run off the score and damage the components. Use a steel ruler as a guide especially if using a new sharp blade. Keep the components organised and away from your work area on a piece of card or tray that we will call your builders yard.

#### Laser Cut Sheet

The front gates have been laser cut for finer detail and are contained on a separate black sheet.

The gates are held onto the sheet by a score line along the base of the gates, carefully run a sharp knife along the score then gently push free using tweezers.

Your working area should have a clean flat surface, and should only contain the kit parts you are actually working on.

Everything else should be kept neatly arranged in the Builder's yard, until needed as shown above.

PLEASE NOTE: Don't throw anything away. Keep all the offcuts and waste card in a box until the kit is finished, just in case you can't find anything. The chances are that it will be there.

### Fig. 1. THE WINDOWS

This is a fiddly bit! Start by cutting out all the plastic window sections. Cut along the thin white lines that mark them out. Place them on a dark surface so you can see them.

IERNER TERNER

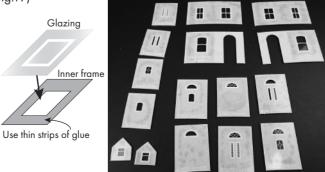

There are multiple options for each window type so keep them grouped together to avoid confusion.

Decide first which style to use.

Fix each of the glazing sheets, matt facing through the openings, to the back of the corresponding inner window and door frames. If you'd like curtains add these now (see fig. 2) You will need 2 front doors (doors A to C) and 1 of each of the lower and upper windows per house front.

If you are adding dormer windows, and/or porches then also glue the glazing for these as well.

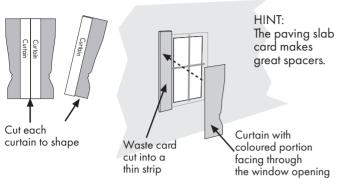

LEAVE THE BAY WINDOW GLAZING TO ONE SIDE (see fig.19)

# Fig. 2. CURTAINS

After you have fitted the glazing, if you require curtains or blinds, now is the time to fit them

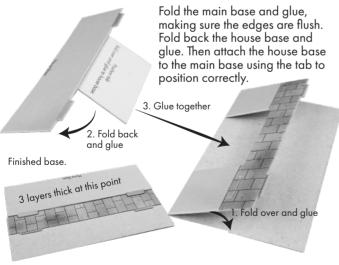

To fit curtains fix a small strip of waste card to each side of the window, then glue the curtain to the waste card so that it shows through the window (the waste card will space the curtain back from the window a little giving a greater effect of depth).

## Fig. 3. THE BASE

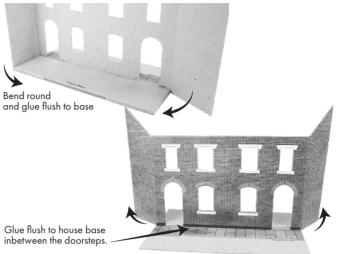

Before you fold and glue the base, if you'd like to have the terraces WITHOUT the front 'yard' and with the additional paving slabs you'll need to carefully cut along the score line indicated by the dotted line above. Then later on cut the rest of the base back to the pavement width required.

## Fig. 4. MAIN OUTER WALLS

On a flat surface position the wall as shown. The front wall fits snugly around the doorstep, and the side walls around the base. Test the position first before applying glue.

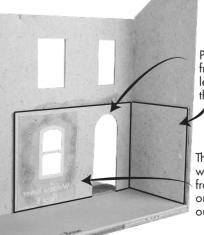

# Fig. 5. INNER WALLS & STRENGTHENERS

There are two strengthener House back sheets included, one for each pair of houses. The plan opposite labels each strengtheners use. Please note that the upper inner walls have been mismatched with the lower  $\wedge$ inner walls, this is how they Bay window base x4 should line up with the smaller upper window over the door. Inner wall upper floor Chimney **1**x2 wall lower floor Inner x3 1 st floor

### Fig. 6. INNER WALL CONSTRUCTION

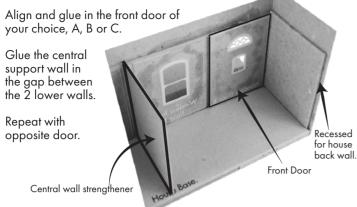

First glue the grey inner lower wall strengthener to the side wall.

Push up to the front wall so it leaves a gap at the rear edge.

Then fit the lower inner wall, lining up the door frame so it sits equally on each side of the outer door opening.

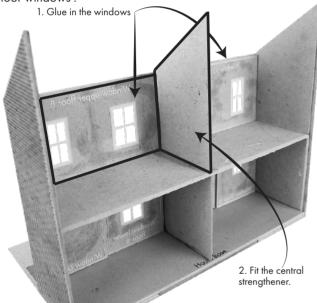

# Fig. 7. DOOR & CENTRE WALL

### Fig. 9. 1st FLOOR WINDOWS

Align and glue in place the upper windows, keeping the small windows above the front doors.

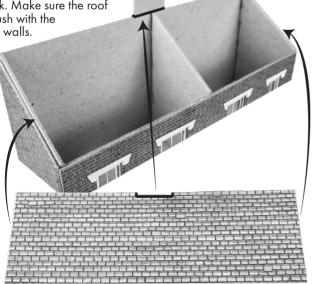

Then fix the central strengthener into the gap between upper floor windows .

### Fig. 11. ROOF

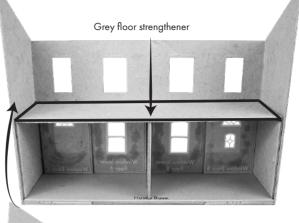

Fit the roof into place aligning the gap on the roof section with the tab on the house

back. Make sure the roof is flush with the side walls.

### Fig. 8. 1st FLOOR

Slot in and glue in place the grey floor strengthener it fits snugly on top of the lower floor windows and the lower wall strengtheners.

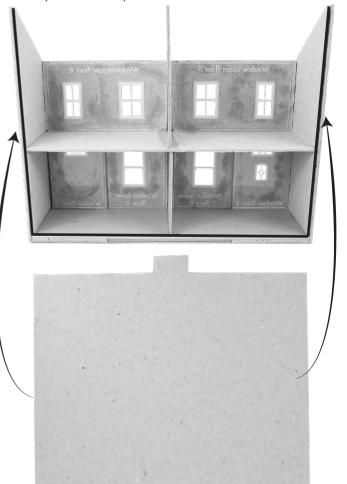

Next glue the upper floor wall strengtheners in place, as with the lower floor align them flush with the side and front wall leaving a gap at the rear.

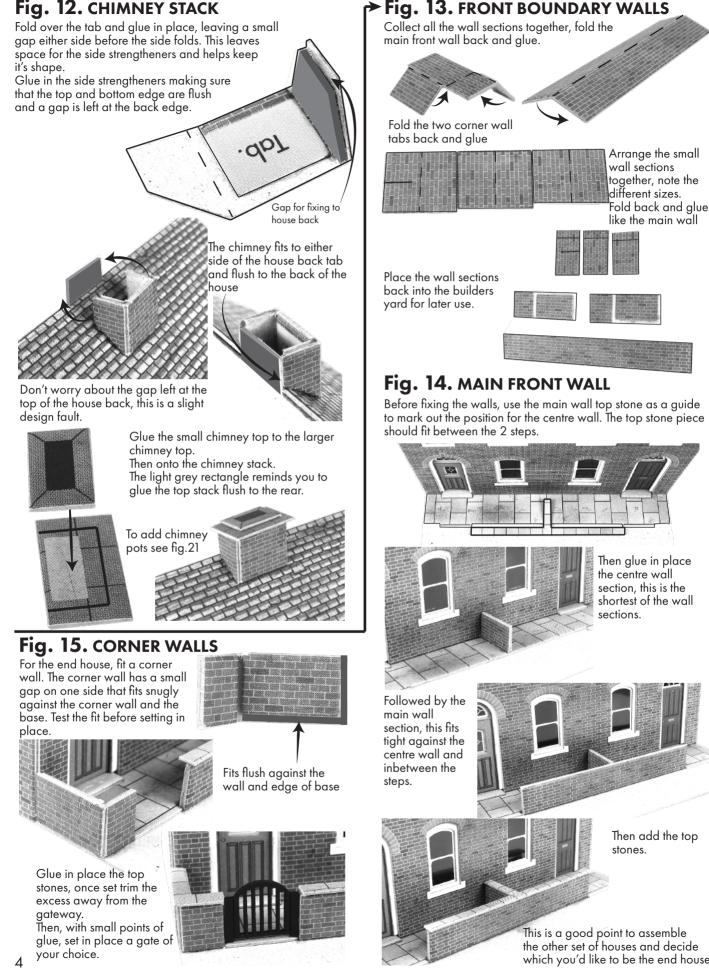

Repeat on the opposite wall.

### Fig. 10. HOUSE BACK

Position and fit into place the grey house back. he back fits on top of the base and flush against the inner strengtheners, with the chimney back in the top centre.

This is a good point to assemble the other set of houses and decide which you'd like to be the end house.

# Fig. 16. ADJOINING WALL

Once you've built the second house block, there is a wall section which joins the two sections together.

Start by carefully aligning and glueing the 2 houses together.

The end join wall (the smaller of the 2 remaining wall sections) slots into the gap inbetween the 2 paving sections and the wall gap.

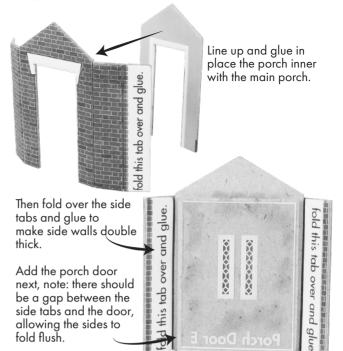

The street facing wall (the wall section with the small black line) then slots into the gap inbetween the steps, with the black line facing the end join wall.

Add the T-shaped topstones and gates like before.

## Fig. 17. PORCH DOOR

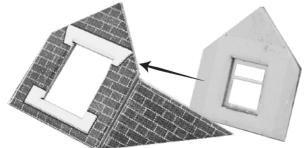

Line up the porch with the gate and glue in place, then add the porch roof section.

## Fig. 18. GABLE DORMER

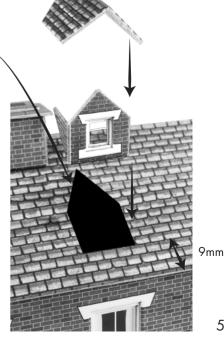

Start by fixing the inner dormer (with window) to the dormer window frame.

Use the black dormer mask (located on page 3 of this instruction sheet) as a guide to glue the dormer into shape.

Then glue the dormer to the building roof roughly 9mm from the edge of the roof.

Then glue the dormer roof into place.

# Fig. 19. BAY WINDOWS

Gather the following parts from your builder's yard, Bay window, bay roof and the grey board spacer.

Next carefully score the bay window glazing along the dotted lines. Then gently fold the ends back about 45 degrees

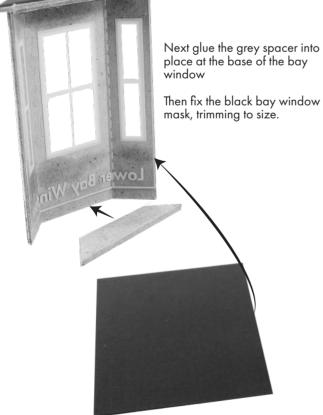

Gently fold back the corner pieces of the bay window.

Fold the bay window roof tab back and glue in place.

Then glue the bay window frame around the roof tab.

Flip the bay window over and with small points of glue attach the glazing into place. Note: check the window alignment before glueing into place.

Position the bay window and glue into place.

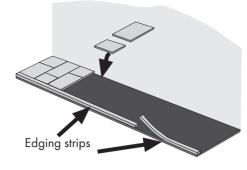

If required build the upper bay window the same way and glue on top of the lower bay window.

# Fig. 20. PAVING

There is a sheet of self adhesive paving slabs in this kit. Peel off the individual slabs from the backing sheet and stick them in place on the brown base area in front of the houses. Start by attaching the thin edging strips, flush along the front edge of the base. Then lay the

flags as shown - one full and one half flag on each row. To cover the whole width in front of the houses should take 31 rows depending on how tightly you lay them.

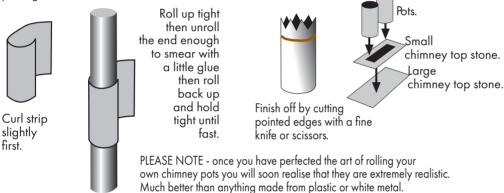

You may need to trim some slabs down to make them fit. NOTE: It is recommended that you place tiny spots of glue under edging strips and slabs for a permanent adhesion.

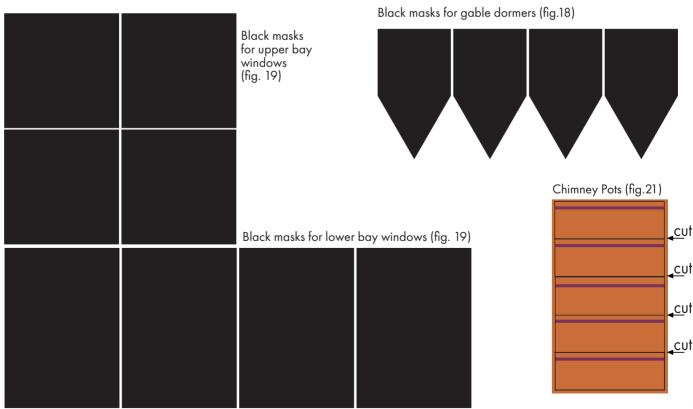

The paving slabs match with our paving pack code no PO210

## Fig. 21. CHIMNEY POTS

Cut into strips then roll tightly around a nail or screw (apx. 4mm dia.) and fix the end with a tiny spot of glue.

So please be patient & keep trying, the chimney pots make all the difference.

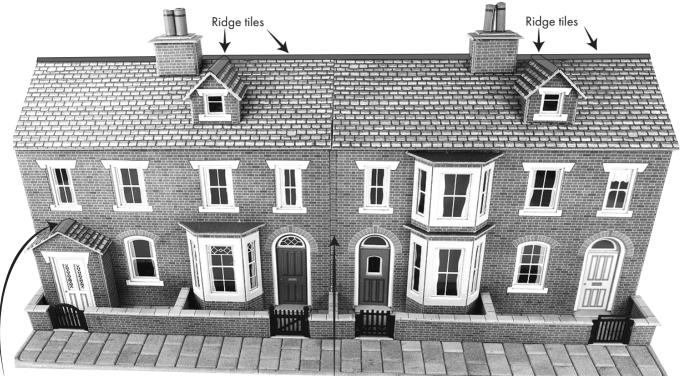

# Fig. 22. FINISHING TOUCHES

Use a strip of the ridge tiles to finish the roof sections of the gable dormers and porch, just cut a strip to the required length and fold along the centre score line, then fit to the roof section along the ridge.

Use a strip of the brick work from Sheet B to cover the gap between the terrace houses.

If you'd like to paint the card edges and fold line of the buildings use a fine brush and water colour paints, test the colour of a bit of waste card before applying to the model.

**Ridge tiles** 

Cut strips of spare brick to cover the joint between the houses.
