

Ultra fine tip Glue Applicators.

Care & Use

Each bottle comes with a plastic screw top, a small metal nozzle and a pin to seal the nozzle when not in use.

The metal nozzle is threaded inside the base and if pushed down and screwed firmly, it will self thread onto the small spout on top of the bottle.

Filling the Bottles

The best glues to use are Speedbond by Deluxe and UHU Solvent Free which are both water based glues and easy to clean out of the nozzle if it blocks up.

Unscrew the plastic top and squeeze the glue out of the glue container into the bottle. If you have a steady hand it is quicker to simply pour the glue as shown here.

Care with the Nozzle

Always replace the pin if not using for more than a couple of minutes. The nozzle will block up from time to time, so simply tip the bottle up as shown here and push the pin inside, then vigorously push and pull the pin whilst squeezing the bottle at the same time. This allows the glue to moisten the dry glue in the nozzle.

If this doesn't help, then take the metal nozzle off and rod it out with the pin from the other end.

Running warm water into the nozzle at the same time works really well and your pin will push any solids out as you go.

ALWAYS store the bottles upside down when not in use. This keeps the glue moist around the nozzle end of the bottle. **REMEMBER** Speedbond glue is the best glue for sticking card to card and UHU glue is best for attaching the plastic glazing pieces to the card window openings.
